

DevOps Engineer (supporting AI research)

We are a VC-backed startup creating a system that lets one voice sound like another, focused on very high-quality output and usability for demanding applications like TV and movies, call centers, and gaming. We have projects underway with top Hollywood studios and major call centers. We are graduates of the Techstars startup accelerator.

We are looking for open-minded devops engineers to join us. We are open to different levels of expertise. We really enjoy the stuff we do. We are a team of 9 people. The technical core is based in Kyiv.

Please peruse our job descriptions below, and if you think you could fit into our team do not hesitate to contact us!

Benefits:

- Be part of a small, relaxed team working on an exciting project in a rapidly growing startup
- Take a leading part in defining your role and our cloud-based and on-premises systems and APIs
- Work mostly on new code, not legacy
- Office in the center
- A modern, fully functional electric kettle, capable of boiling water in less than a minute (maybe)

Duties:

- Develop the infrastructure supporting our growing R&D team and our rapidly changing product
- Optimize all stages of a machine learning model's life-cycle: from research to high-load production
- Scale data ingestion, model training, and inference processes to support thousands of audio streams
- Set up a continuous deployment pipeline for our web apps
- Help design and implement a system to keep track of experimental results

We expect you to:

- Have experience with or desire to work with AI products and teams of deep learning researchers
- Work well in a team and independently
- Have upper intermediate or better English

Would be a plus:

- Experience with Kubernetes
- Experience with machine learning and data science
- Experience with web development (we use React on the frontend and python on the backend)
