

Full-Stack Web Developer (Python backend)

We are a VC-backed startup creating a system that lets one voice sound like another, focused on very high-quality output and usability for demanding applications like TV and movies, call centers, and gaming. We have projects underway with top Hollywood studios and major call centers. We are graduates of the Techstars startup accelerator.

We are looking for open-minded middle/senior engineers to join us. We really enjoy the stuff we do. We are a team of 9 people. The technical core is based in Kyiv.

Please peruse our job descriptions below, and if you think you could fit into our team do not hesitate to contact us!

Benefits:

- Be part of a small, relaxed team working on an exciting project in a rapidly growing startup
- Take a leading part in defining your role and our cloud-based systems and APIs
- Work mostly on new code, not legacy
- Office in the center
- A modern, fully functional electric kettle, capable of boiling water in less than a minute (maybe)

Duties:

- Develop and improve a set of internal and customer-facing web apps
- Help developing internal tooling for our machine learning research infrastructure
- Take part in architecting and building an AI-based, real-time, high-load voice conversion system

We expect you to:

- Have excellent software engineering and architecture skills. (Work will mostly be in Python, but experience with other languages is a plus.)
- Have experience building and designing REST APIs
- Have considerable experience with one of the modern front-end frameworks (preferably React)
- Have working knowledge of databases (SQL and no-SQL)
- Have experience with modern Linux system administration, including cloud services and docker
- Work well in a team and independently
- Have upper intermediate or better English

Would be a plus:

- Experience with organizing security of multi-service apps
- Experience with machine learning and data science
- Experience with C++
